

Project Initialization and Planning Phase

Date	15 July 2026
Project Name	Rising Waters: A Machine Learning Approach to Flood Prediction
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template)

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love. A well-articulated customer problem statement allows you and your team to find the ideal solution for your customers' challenges. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A farmer / resident living in a monsoon-prone river basin village	Get advance warning before flood waters rise, so I can move my family, livestock, and stored grain to safety	My village has no telemetry-based warning system, and state-level forecasts aren't specific to my exact location	Low-cost, hyperlocal flood risk tools aren't available to small or under-resourced communities	Anxious and unprepared every monsoon season
PS-2	A local disaster management officer coordinating flood response across several villages	Decide which villages to evacuate first based on real, data-backed flood risk rather than guesswork	I only receive raw rainfall figures from weather stations, with no simple way to turn them into a risk score	There is no accessible tool that converts meteorological readings into an instant, region-specific flood probability	Overwhelmed and worried about making the wrong call under time pressure
