

Empathy Map

Date	15 July 2026
Project Name	Rising Waters: A Machine Learning Approach to Flood Prediction
Maximum Marks	4 Marks

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS • “I never know how bad the rains will get until the water is already at my door.” • “The official warnings are too general — they don’t tell me about my specific village.” • “I want to protect my family and livestock, but I need more lead time.”	PERSONA Village Resident / Farmer <i>(User in a flood-prone river basin)</i>	THINKS • If only I had a day’s notice, I could move everything to higher ground in time. • Is there a way to know my exact risk instead of just “heavy rain expected”? • Technology could help villages like mine if it were made simple and accessible.
DOES • Checks local news and word-of-mouth for flood warnings every monsoon season • Moves valuables and stored grain to higher shelves each year as a precaution • Relies on community elders’ experience-based judgment on when to evacuate		FEELS • Anxious during monsoon season, especially overnight • Frustrated by generic, delayed, region-wide warnings • Hopeful that a data-driven tool could give real advance notice
