

Customer Journey Map

Date	15 July 2026
Project Name	Rising Waters: A Machine Learning Approach to Flood Prediction
Maximum Marks	2 Marks

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1: Discovery	Stage 2: Prediction	Stage 3: Result & Action
Actions <i>What does the customer do?</i>	- Hears about the tool via community outreach, college project demo, or a web search for flood risk info - Opens the Rising Waters home page - Reads the intro and views the animated rain-gauge visual	- Clicks "Predict Floods" to open the input form - Enters cloud cover and seasonal rainfall values - Submits the form for a prediction	- Views the risk verdict and confidence percentage - Reviews the recap of entered values - Decides whether to prepare, alert others, or continue normally
Touchpoint <i>What part of the service do they interact with?</i>	- Home page (home.html) - Static assets (rain-gauge SVG, styling)	- Prediction form (index.html) - Client-side validation (script.js)	- Result page (chance.html / nochance.html) - Probability ring visual
Customer Thought <i>What is the customer thinking?</i>	"Is this actually going to tell me something useful for my area?"	"I hope I'm entering the right numbers — will it warn me if I make a mistake?"	"Okay, now I know my risk level — what should I do next?"
Customer Feeling <i>What is the customer feeling?</i>	Curious, slightly skeptical	Focused, a little anxious about accuracy	Relieved and informed (safe) or alert and prepared (flood risk)
Process Ownership <i>Who is in the lead on this?</i>	Frontend / UI (home.html, static/)	Frontend validation (script.js) + backend validation (app.py)	Prediction pipeline (models/floods.save, transform.save) + result templates
Opportunities <i>How can we improve this stage?</i>	Add a short explainer or regional testimonial to build trust faster	Auto-suggest typical seasonal values or validate against regional norms	Add actionable next-step guidance (e.g. nearest shelter, checklist) beyond just the score
